# Wednesday 11 December 2024

Published 10 Dec 2024, 17:00:00 Valid from 10 Dec 2024, 17:00:00 until 11 Dec 2024, 17:00:00

#### **Danger Level 1 - Low**

**Tendency: Constant avalanche danger** on Thursday 12 December 2024

# Caution: older drift snow in higher alpine regions, especially in gullies and bowls with old snowpacks.

#### Danger assessment

The Avalanche danger above around 2.000 m AMSL is moderate, below 2.000 m AMSL: low. Stormy winds from west to northwest cleared out exposed slopes but drifted snow towards gullies and bowls behind ridgelines. Snowdirftpacks tend to be prone to triggering, possible with bigger additional load. Danger spots are hardly visible due to new snowpack layers. Small to medium slab avalanches are possible.

#### Snowpack

The amount of new snow from Saturday is about 50 cm. The snow got on bare soils, fresh snow drift in gullies and bowls in highe shady slopes got on bonded snow from the last Novemberdays which transformed to facetted snow crystals. The bonding is weak. Little amounts of freshly fallen snow since Saturday causing hidden danger spots.

#### Weather

During Tuesday predominately overcast but not snow. Wind stays weak, temperatures in 2.000 m AMSL will be around -5°C.

#### Tendency

Decreasing wind slab problem.

## Wednesday 11 December 2024

Published 10 Dec 2024, 17:00:00 Valid from 10 Dec 2024, 17:00:00 until 11 Dec 2024, 17:00:00

#### **Danger Level 1 - Low**

**Tendency: Constant avalanche danger** on Thursday 12 December 2024

### Small Danger zones due to snow drifts

Wind slab

#### Danger assessment

A few danger spots caused by freshly fallen drift snow layers on old snow packs from the last Novemberdays are located in shady slopes. Slab avalanches can only be triggered by higher additional loads. The scale of such avalanches would be small (sluff).

#### Snowpack

South of the Alps few snow, expected snowfall during the night predominately north of the Alps. Precipitations from the Italian low pressure system are expected only on the edges of the southern Alps with little amounts of snow and only few winds.

#### Weather

During Tuesday predominately overcast but not snow. Wind stays weak, temperatures in 2.000 m AMSL will be around -5°C.

#### **Tendency**

No significant changes of the avalanche danger. Decreasing wind slab problem.
