Wind slab

^

Treeline

Persistent
weak layer

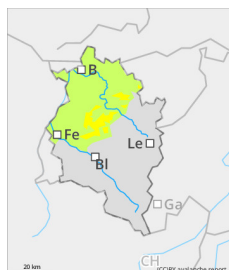

^

2200m

Weak layers in the old snow are the major danger.

Danger Level 2 - Moderate

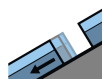

Tendency: Constant avalanche danger →
on Saturday 21 December 2024

Wind slab

Treeline

Gliding snow

Avalanche danger is mostly low. Isolated glide-snow avalanches.

Weather

During the nighttime hours it will remain variably cloudy and dry. On Thursday, conditions will be pleasant from the start, and some foehn impact will be felt. Clouds will become denser during the daytime, some light precipitation is expected in late afternoon. At 2000m: from +6 to -1 degree. Brisk to strong-velocity W/SW winds at high altitudes.

Tendency

Avalanche danger will increase slightly on Friday due to fresh fallen snow and wind impact.
