daytime cycle of naturally triggered avalanches

numerous and widespread

## Daytime cycle of wet-snow/glide-snow activity

Avalanche danger rises through the morning from low to moderate, due to the increasingly wet snowpack. Favorable conditions will still reign in the morning. In steep terrain in all aspects, increasingly frequent naturally triggered wet loose-snow avalanches become likelier as the day progresses. Even large-sized glide-snow avalanches in steep grass-covered terrain are possible at any time of day or night. Heed glide cracks and fishbones!

### Snowpack structure

The snowpack in early morning is melt-freeze encrusted, then softens and moistens very quickly on sunny slopes in particular, the snow is often rotten. Due to wetness, the whole snowpack destabilizes more and more. On steep north-facing slopes at high altitudes there are still reserves of cold; in these places there are weak layers of faceted crystals.

### Weather

On Saturday, sunshine through Styria, some convective clouds can accumulate in the afternoon in the western regions, but it will remain dry and springlike. At 2000 m: +3 degrees. Light northerly winds.

### Outlook

On Sunday, sunny, a bit warmer. The daytime danger cycle requires attentiveness. Backcountry skiing tours should begin early, end early.

#### Avalanche problems

New snow

Wind drifted snow

Persistent weak layer

Wet snow

Gliding snow

No problem

#### Danger ratings

daily cycle of naturally triggered avalanche activity

## Favorable touring conditions, but backcountry touring possibilities already reduced

Avalanche danger is low amid favorable conditions, but naturally triggered wet loose-snow avalanches become likelier during the course of the day in steep terrain. Avoid glide cracks and fishbones!

### Snowpack structure

The snowpack is encrusted in early morning, becomes soft and moist swiftly. Low altitudes and south-facing slopes are bare of snow up to high altitudes.

### Weather

On Saturday, sunshine through Styria, some convective clouds can accumulate in the afternoon in the western regions, but it will remain dry and springlike. At 2000 m: +3 degrees. Light northerly winds.

### Outlook

On Sunday, sunny, a bit warmer. The daytime danger cycle requires attentiveness. Backcountry skiing tours should begin early, end early.
